

QuickFix Pharmacy Platform: Backend API Documentation

Base URL: /api/v1/ (or your configured root routing path)

Protocol: HTTPS

Data Format: JSON (except for multi-part endpoints like product asset updates)

1. Authentication & User Management

1.1 User Login

Authenticates user credentials and issues **HttpOnly, Secure, Lax** JWT cookies (access_token, refresh_token) to establish session bounds seamlessly without frontend storage overhead.

- **URL:** usermng/login
- **Method:** POST
- **Authentication Required:** None (AllowAny)
- **Request Payload:**

```
JSON
{
  "username": "cashier1",
  "password": "securepassword123"
}
```

(Note: The username parameter accepts either the standard account handle string or a registered email identity format)

- **Success Response (200 OK):**
 - **Headers:** Set-Cookie: access_token=..., Set-Cookie: refresh_token=...
 - **Body:**

```
JSON
{
  "username": "cashier1",
  "userid": 3,
  "role": "CASHIER"
}
```

1.2 Token Refresh Lifecycle

Reads the persistent long-lived cookie token parameter back out of storage layers to generate a renewed, temporary short-term cookie authorization credential token wrapper.

- **URL:** usermng/refresh
- **Method:** POST
- **Authentication Required:** None (Reads HttpOnly refresh_token Cookie)

- **Success Response (200 OK):**
 - **Headers:** Set-Cookie: access_token=...
 - **Body:**
JSON

```
{
    "detail": "Token refreshed successfully."
}
```

1.3 Patient Registration (Signup)

Creates a restricted CUSTOMER base profile, binds an initial empty Cart database model entity, and sends a base verification email challenge.

- **URL:** usermng/signup
- **Method:** POST
- **Authentication Required:** None (AllowAnonymous)
- **Request Payload:**
JSON

```
{
    "username": "patientx",
    "email": "patientx@mail.com",
    "password": "Password123!",
    "repassword": "Password123!",
    "fullname": "Jane Doe",
    "dob": "1994-08-23",
    "gender": "F",
    "number": "+628123456789"
}
```
- **Success Response (201 Created):**
JSON

```
{
    "detail": "Registration successful. Please check your email to verify your account."
}
```

1.4 Email Link Verification

Validates token arrays sent via signature verification emails, updates account activation statuses, and issues automatic HttpOnly login cookies.

- **URL:** usermng/verify-email
- **Method:** POST
- **Request Payload:**
JSON

```
{
```

```
"uid": "NDA",
"token": "b8v0sc-9a2d8b4e7c3f8g1h2i3j"
}
```

- **Success Response (200 OK):**

- **Headers:** Set-Cookie: access_token=..., Set-Cookie: refresh_token=...

- **Body:**

JSON

```
{
  "detail": "Email verified successfully!",
  "username": "patientx",
  "userid": 4,
  "role": "CUSTOMER"
}
```

2. Product & Inventory Management

2.1 Staff Item Management Inventory List

Fetches comprehensive product master profile structures, nested alongside full underlying batch entries for structural pharmacy dashboard auditing.

- **URL:** manage/list
- **Method:** GET
- **Authentication Required:** None (Recommended: Add Staff Authentication Guardrails)
- **Query Parameters:** query (Filter by SKU, Name, Generic), category (Filter ID List), presc (true/false), page (Int), page_len (Int)
- **Success Response (200 OK):**

JSON

```
{
  "data": [
    {
      "id": "034040f9-c6f6-4713-bbf2-5479b2631715",
      "category": 5,
      "category_name": "Obat Bebas",
      "name": "Cetirizines",
      "sku": "SKU-35032",
      "generic_name": "Cetirizines",
      "description": "Indikasi alergi rinitis...",
      "dosage_form": "Syrupy",
      "strength": "100mg",
      "price": "4334.00",
      "minimum_stock": 11,
      "requires_prescription": false,
    }
  ]
}
```

```

    "image_url": "https://api.site.com/media/products/drug.png",
    "is_active": true,
    "created_at": "2026-06-03T03:27:59-07:00",
    "batches": [
      {
        "id": 30,
        "product_id": "034040f9-c6f6-4713-bbf2-5479b2631715",
        "batch_number": "BATCH-9204",
        "supplier_id": 7,
        "supplier_name": "Bray, Morgan and Dawson",
        "expiry_date": "2027-02-19",
        "stock_qty": 64,
        "created_at": "2026-06-03T03:27:59-07:00"
      }
    ]
  },
  "pagination": {
    "current_page": 1,
    "page_len": 10,
    "total_items": 1,
    "total_page": 1
  }
}

```

2.2 Product Configuration Actions

Manages product profile entity lifecycles. Uses multi-part form-data parsing engine support rules to accept raw image asset binary uploads.

- **URL:** product/action
- **Authentication Required:** IsAuthenticated (Staff Roles)
- **Parser Headers:** multipart/form-data

POST: Create Product Profile

- **Request Body:** Form-Data fields (sku, name, category, price, generic_name, dosage_form, strength, minimum_stock, description, requires_prescription, image)

- **Success Response (201 Created):**

```

JSON
{
  "details": "Product created successfully",
  "id": "166fd1ff-988c-4ea0-b747-baa2199379d1"
}

```

PUT: Update Product Profile

- **Request Body:** Form-Data fields including target identifier ID (id, sku, name, category, price, etc.)
- **Success Response (200 OK):**
JSON

```
{  
  "details": "Product updated successfully"  
}
```

DELETE: Wipe Product Profile

- **Query Parameters:** id (UUID String)
- **Success Response (200 OK):**
JSON

```
{  
  "details": "Product removed successfully"  
}
```

2.3 Set Product Active State Toggle

Allows staff operators to activate or archive item entries via simple toggle flags without submitting a full multipart form payload.

- **URL:** product/activate
- **Method:** PUT
- **Authentication Required:** IsAuthenticated
- **Query Parameters:** id (UUID String), is_active (true/false)
- **Success Response (200 OK):**
JSON

```
{  
  "details": "Product updated successfully"  
}
```

3. Stock Batch & Log Audit Movements

3.1 Batch Inventory Operations

- **URL:** batch/action
- **Authentication Required:** IsAuthenticated

POST: Register New Product Batch Stock

Registers a new physical batch tracking partition under a target base medication profile and appends a "PURCHASE" movement trace history entry.

- **Request Body (JSON):**

```
JSON
{
  "product_id": "034040f9-c6f6-4713-bbf2-5479b2631715",
  "batch_number": "BCH-2026-991",
  "supplier": 7,
  "expiry_date": "2028-12-01",
  "stock_qty": 150
}
```

- **Success Response (201 Created):**

```
JSON
{
  "details": "batch created"
}
```

PUT: Adjust Existing Stock Batch Metrics

Modifies batch reference states, computes delta variation steps internally, and appends adjustments to transaction audit log fields.

- **Query Parameters:** id, batch_number, supplier, expiry_date, stock_qty, type (e.g., "ADJUSTMENT")
- **Success Response (200 OK):**

```
JSON
{
  "details": "batch edited"
}
```

DELETE: Purge Stock Batch

- **Query Parameters:** id
- **Success Response (200 OK):**

```
JSON
{
  "details": "batch deleted"
}
```

4. Patient Shopping Cart Actions

- **URL:** cartitem/action
- **Authentication Required:** IsAuthenticated (Customer Access Role Mapping)

4.1 POST: Append Item to Cart

- **Request Body:** {"item_id": "UUID", "quant": 2}
- **Success Response (200 OK):** Item added or quantity incremented.

4.2 GET: Read Personal Cart Items View

- **Query Parameters:** page (Int)
- **Success Response (200 OK):** Returns items array containing fully nested item model summaries.

4.3 PUT: Overwrite Item Quantity Counter

- **Query Parameters:** item_id (CartItem Table Index ID), quant (Target Int)
- **Success Response (200 OK):** {"details": "quantity saved"}

4.4 DELETE: Drop Item row from Cart

- **Query Parameters:** item_id
- **Success Response (200 OK):** {"details": "item deleted"}

5. Order Management & Verification

5.1 Create Order out of Cart Checkout

Converts items in a user's cart into a master invoice order record wrapped in an atomic database transaction.

- **URL:** order/create
- **Method:** POST
- **Authentication Required:** IsAuthenticated
- **Request Body:**
JSON
{
 "cart_items": [12, 15]
}
- **Success Response (201 Created):**
JSON
{
 "details": "Order Created.",
 "transaction_id": "b14452d5-c948-4c77-9736-26e8b2eda5ab"
}

5.2 Staff Active Queue Order Processing

Fetches split active tracking logs separated into an incoming target array (created) and items marked as in progress (prepare).

- **URL:** order/manage/list
- **Method:** GET

- **Authentication Required:** IsAuthenticated
- **Success Response (200 OK):**

JSON

```
{
  "created": [ { "id": "uuid", "status": "ORDER_CREATED", "total_amount": "154814.00" } ],
  "prepare": [ { "id": "uuid", "status": "PREPARING", "total_amount": "45000.00" } ]
}
```

5.3 Cashier Point-of-Sale QR Code Order Scan

Allows cashier terminal scanners to decode an order ID parameter string and instantly retrieve unified patient, verification profile, and invoice records.

- **URL:** order/scan
- **Method:** GET
- **Authentication Required:** IsAuthenticated
- **Query Parameters:** id (UUID Target)
- **Success Response (200 OK):**

JSON

```
{
  "data": {
    "id": "b14452d5-c948-4c77-9736-26e8b2eda5ab",
    "status": "PAID",
    "total_amount": "154814.00",
    "items": [
      {
        "id": 139,
        "product": { "name": "Cetirizines", "dosage_form": "Syrupy", "strength": "100mg" },
        "quantity": 5,
        "price_at_purchase": "24334.00"
      }
    ]
  },
  "user": { "id": 60, "username": "customer1", "email": "customer1@mail.com" },
  "profile": { "date_of_birth": "1979-02-03", "gender": "M", "phone_number": "265.891.3934",
    "allergies": "travel" }
}
```

5.4 Pharmacist Order Fulfillment Batch Mapping

Ties an inventory storage batch key row record to a specific item inside an active order during physical product allocation fulfillment workflows.

- **URL:** orderitem/setbatch
- **Method:** PUT

- **Authentication Required:** IsAuthenticated
- **Query Parameters:** id (OrderItem Identifier Key), batch (Target ProductBatch Index Identifier)

- **Success Response (200 OK):**

JSON

```
{  
  "details": "Product edited successfully"  
}
```
